Implementation & Testing

Conclusion & Suggestion

INTRODUCTION

There are tons of **daily personal knowledge** that must be managed,
but they can't be handled with regular tools.

Daily personal knowledge are things like details or facts of:

People Profiles
and contacts

Organizations, Schools,
and Companies

Glossary of
Definition

Hardware and Software
Product Listing

Publication of Papers, Books,
News, or Presentations

Known or Visited
Places or Locations

Upcoming and Attended
Events or Schedule

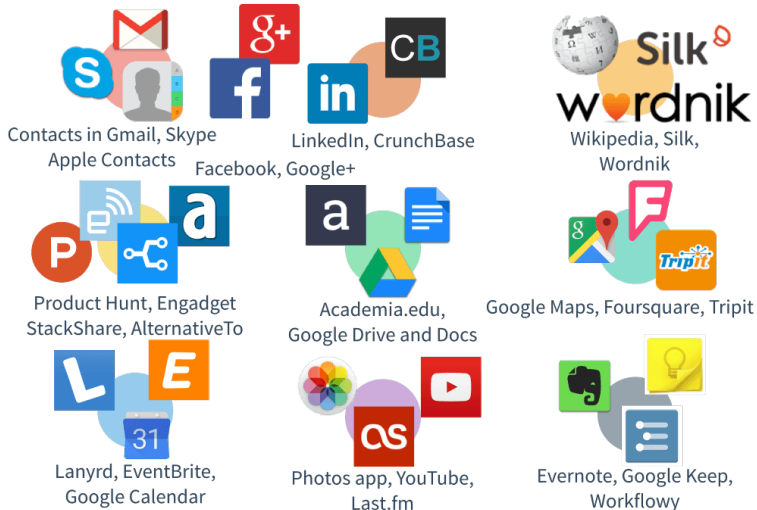

Multimedia Info such as
Photo, Music, or video

Lot of Other
Miscellaneous Things

All of these are also the context of knowledge

There are a lot of tools/systems for each, that contains knowledge

There is a need for a single personalized system

How to manage those daily personal knowledge with single system?

- Solve a problem around **daily knowledge management** with a system that is personal.
- Essential knowledge are mostly separated into too many softwares.
- Need for a simple and single personalized system.
- Managing knowledge should use a **knowledge manager**.

Define and develop a personal knowledge manager named “Satellid”, that built using Web technologies.

1. How to manage tons of personal knowledge with just a simple and single system of knowledge manager?
2. How can knowledge manager naturally structure the data into knowledge that has context?

- Create a **simple system** to do **daily knowledge management** for **personal** use
- The main methodologies are **agile**, **MVP**, and **ATDD**.
- The main technologies are **MongoDB**, **JavaScript**, and **Meteor framework**.

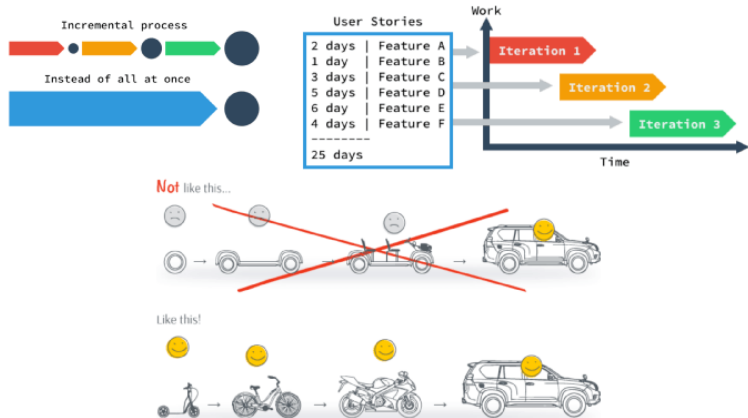

LITERATURE STUDY

KNOWLEDGE MANAGEMENT SYSTEM

Data-Information-Knowledge-Wisdom (DIKW),
Knowledge Management System (KMS),
Personal Knowledge Manager

SOFTWARE DEVELOPMENT LIFE CYCLE (SDLC)

Agile methodologies,
Minimum Viable Product (MVP)

DESIGN PATTERN

Single Page
App Design

Common/Traditional
App Design

VS

BROWSE, READ, EDIT, ADD, DELETE (BREAD),
simple interaction and interface design with mockup,
Single Page Application (SPA)

Document/Schema-less
Data Model

mongoDB

Document-based NoSQL database named MongoDB

With JavaScript and JSON related technologies

on top of **Node.js**

build a Web application

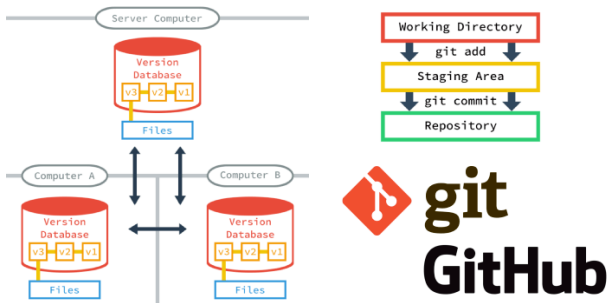

using full stack framework named Meteor

VELOCITY

software tested in Acceptance Test Driven Development (ATDD)

SOURCE CODE MANAGEMENT

source code is version controlled using **Git**
and distributed via **GitHub**

ANALYSIS & DESIGN

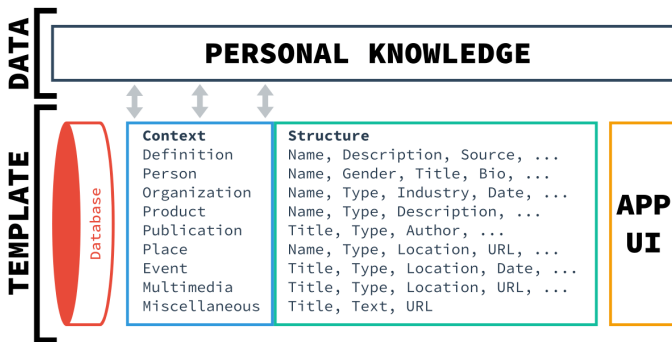

Target User:

Person who frequently gather and really want to manage their tons of knowledge at almost everytime

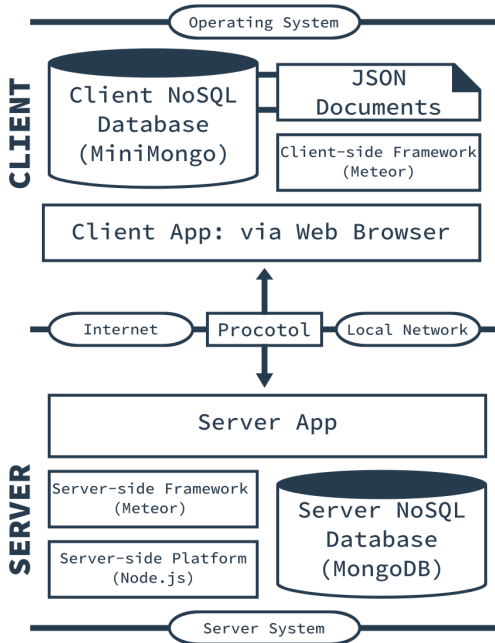

User Types:

Regular person, researcher, engineer, developer, designer, information architect, event speaker, student, teacher, leader, collaborator, colleagues, recruiter, etc

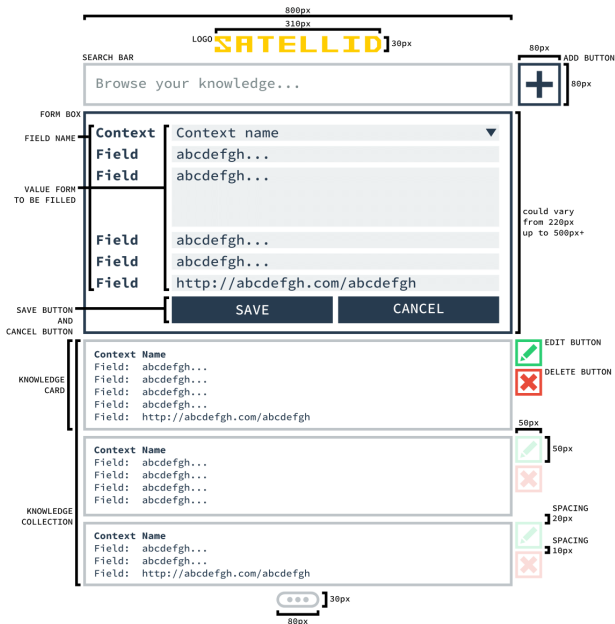

A data and template approach to classify the knowledge with its context and structure.

DESIGN: APPLICATION ARCHITECTURE

DESIGN: USER INTERFACE MOCKUP

DESIGN: USER INTERACTION

TERMINAL / CLI

```
$ meteor
[[[[[ /path/to/satellid/app ]]]]]
=> ...
=> Running at: http://localhost:3000
```

TURN ON/OFF
THE SYSTEM
VIA
TERMINAL/CLI

USER

WEB BROWSER

TYPE AND SEARCH Could automatically
show the search result

| | |
|-------------|----------------|
| Context | Context name ▼ |
| Field A | Value A... |
| Field B | Value B... |
| Field C | Value C... |
| Field D | Value D... |
| Field E | Value E... |
| SAVE CANCEL | |

Context name
Field A: Value A
Field B: Value B
Field C: Value C
Field D: Value D
Field E: Value E

Modifier buttons will
be visible or opaque
when a knowledge
is hovered or selected

ADD KNOWLEDGE
Will show the
form box

FORM BOX TO
TYPE KNOWLEDGE
CONTENT
WITH CONTEXT

Save will store
the knowledge

Cancel will close
the form box

EDIT KNOWLEDGE

DELETE KNOWLEDGE

BROWSE & READ
EXISTING KNOWLEDGE
AND
SEARCH RESULT

ACCESS AND USE
THE SYSTEM
VIA
WEB BROWSER

Edit will have the edit mode
with form box which
the context could not
be changed

All knowledge collection
will be represented in
card-like visual

*** Loading indicator will be visible
when retrieving other knowledge

SYSTEM

IMPLEMENTATION & TESTING

SATELLID

Snippets of Server Code

```
if (Meteor.isServer) {  
  Meteor.startup(function() {  
    // ...  
  });  
}
```

Snippets of Client Code

```
if (Meteor.isClient) {  
  Template.add.events({  
    "click": function() {  
      // ...  
    }  
  });  
}
```

CLOSING

- Simple and single system of managing tons of personal daily knowledge that implemented with Web technologies
- Satellid can be used for collecting and managing various daily personal knowledge, for the easiness and embetterment of knowledge management.

- More predefined context and field.
- Can have custom form.
- Can easily import and export, including backup.
- BREAD a template.
- Multimedia support.
- Integration with other networks.

THANK YOU

EXTRA NOTES

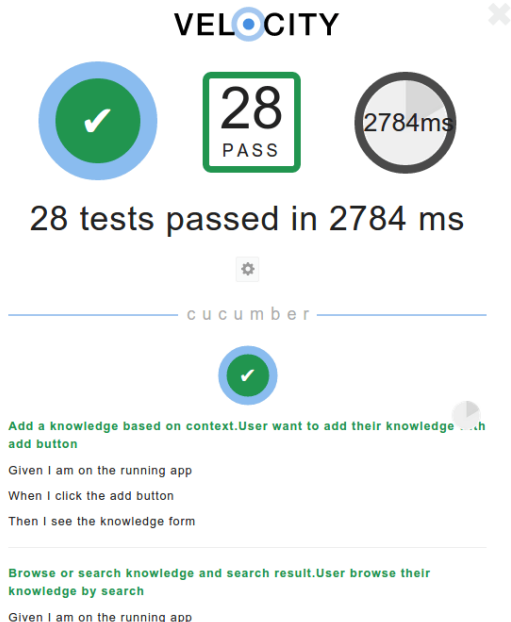

1. As a System, I need to be run on supported platform and via a network
2. As a System, I can have the data imported without the app opened
3. As a User, I want to use the app via web browser
4. As a User, I want to read knowledge that already stored
5. As a User, I want to search a knowledge and view the search result
6. As a User, I want to add a new knowledge based on context
7. As a User, I want to delete a stored knowledge
8. As a User, I want to edit a stored knowledge

Feature: Example feature title

As a user of this feature
I want to have these steps
So that I can have the expected result

Scenario: Specific situation description
Given a condition
And an other condition
When a performed action by someone
Then an output is presented

SQL VS DOCUMENT-BASED (NOSQL)

| id | name | loc |
|----|------|-----|
| 0 | abc | 1,2 |
| 1 | def | 3,4 |
| 2 | ghi | 5,6 |

Relational/Table
Data Model

Document/Schema-less
Data Model

- ✓ Represent document in real world
- ✓ Flexible schema
- ✓ Data nesting
- ✓ Various or complex data structure
