SATELLID: PERSONAL KNOWLEDGE MANAGER

with Web Technologies

Muhammad Haidar Hanif 18 March 2015

Informatics Engineering - Gunadarma University

OUTLINE

Introduction
Literature Study
Analysis & Design
Implementation & Testing
Conclusion & Suggestion

There are tons of daily personal knowledge that must be managed, but they can't be handled with regular tools.

Daily personal knowledge are things like details or facts of:

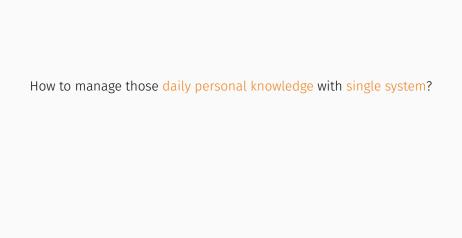

All of these are also the context of knowledge

There are a lot of tools/systems for each, that contains knowledge

There is a need for a personalized single system

PRIMARY BACKGROUND

Solve a problem around daily knowledge management with a system that is personal

PRIMARY OBJECTIVE

Define and develop a personal knowledge manager called "Satellid knowledge manager", that built using Web technologies.

PROBLEM DEFINITION

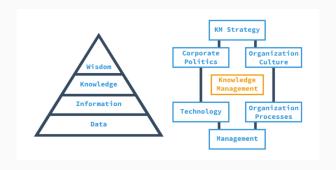

- 1. How to manage tons of personal knowledge we have with just a simple and single system of knowledge manager?
- 2. How can knowledge manager naturally structure the data into knowledge that has context?

PROBLEM SCOPE

- Create a simple system to do daily knowledge management for personal use
- · The main methodologies are agile, MVP, and ATDD.
- The main technologies are MongoDB, JavaScript, and Meteor framework.

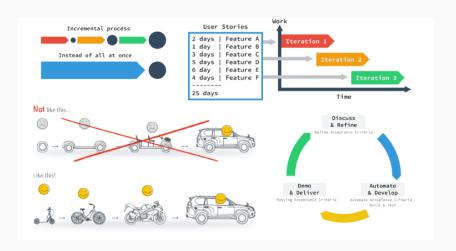

LITERATURE STUDY

KNOWLEDGE MANAGEMENT SYSTEM

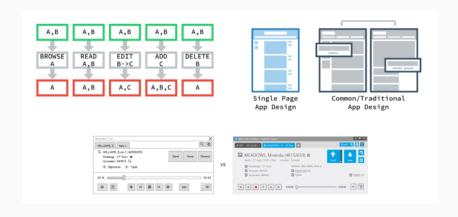

Data-Information-Knowledge-Wisdom (DIKW), Knowledge Management System (KMS), Personal Knowledge Manager

SOFTWARE DEVELOPMENT LIFE CYCLE (SDLC)

Agile methodologies,
Minimum Viable Product (MVP),
Acceptance Test Driven Development (ATDD)

DESIGN PATTERN

BROWSE, READ, EDIT, ADD, DELETE (BREAD), simple interaction and interface design with mockup, Single Page Application (SPA)

Document-based NoSQL database called MongoDB

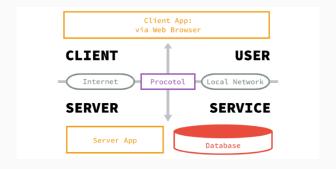

With JavaScript and JSON related technologies

PLATFORM

on top of Node.js

WEB APPLICATION

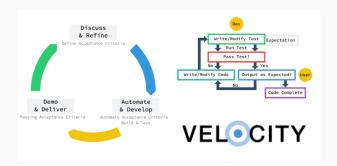

build a Web application

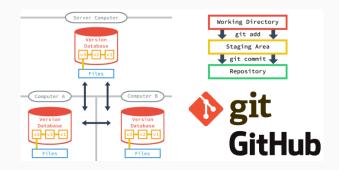

using full stack framework called Meteor

SOFTWARE TESTING

software tested in Acceptance Test Driven Development ()ATDD)

SOURCE CODE MANAGEMENT

source code is version controlled using Git and distributed via GitHub

ANALYSIS & DESIGN

ANALYSIS

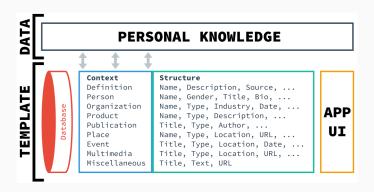

Target user:

Person who frequently gather and really want to manage their tons of knowledge at almost everytime

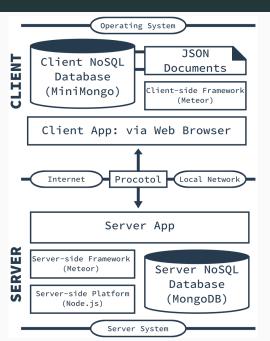

User Types:

Regular person, researcher, engineer, developer, designer, information architect, event speaker, student, teacher, leader, collaborator, colleagues, recruiter, etc

A data and template approach to classify the knowledge with its context and structure.

DESIGN: APPLICATION ARCHITECTURE

IMPLEMENTATION & TESTING

```
Snippets of Server Code
    if (Meteor.isServer) {
      Meteor.startup(function() {
      });
Snippets of Client Code
    if (Meteor.isClient) {
      Template.add.events({
        "click": function() {
      });
```

CLOSING

CONCLUSION

Simple and single system of managing tons of personal daily knowledge that implemented with Web technologies

SUGGESTION FOR FUTURE WORK

- · Can have custom form
- · Can easily import and export, including backup
- · BREAD a template
- · Multimedia support
- · Integration with other networks
- \cdot Encryption
